

A Samsung pseudo space satellite, part of the company's 'SpaceSelfie' campaign, made an unexpected landing on a farm in Michigan. The satellite was designed to take selfies from the stratosphere using a Galaxy S10 5G smartphone. Launched from Iowa, the device descended earlier than planned due to weather conditions, causing a brief power outage in the area. Samsung apologized for the incident and retrieved the satellite. The 'SpaceSelfie' campaign allowed customers to have their photos displayed above Earth, with the service initially expected to run until the end of October.
